## The Ultimate Foaming Chlorinated Detergent

FCC-8 is the ultimate chlorinated foaming detergent. At higher concentrations, FCC-8 removes soils untouched by other detergents; and at lower concentrations FCC-8 provides the lowest usage cost.

FCC-8's high-foaming blend of wetting agents, water conditioners, potassium hydroxide, bleach and rinsing additives excels at saponifying and emulsifying fat, oil and grease found in all processing facilities dealing with meat, fish, poultry, vegetables & starches. Chlorinated action is effective on sugars, carbohydrates, and eliminates foul odors and stains caused by microorganisms, mold & mildew. FCC-8 is fortified with additives to enhance your equipment's appearance and to be effective in hard water reducing the need for acid washing. FCC-8 is safe for use on hard surfaces capable of withstanding high caustic cleaning.

- Super High Levels of Caustic & Bleach
- Brightens Cutting Boards & Plastic Belts
- Destroys the Toughest Soils
- Rinses Easily & Leaves Equipment Shiny

**Usage Directions:** Dilute FCC-8 in accordance with Dilution Guidelines chart. For even better performance, dilute with warm water (140°F). Remove large soils and rinse surfaces with cold water. Apply FCC-8 solution directly to surface with foam apparatus, brush or scouring pad. Allow sufficient time (10 minutes) for FCC-8 solution to penetrate and dislodge all soils. Do not allow FCC-8 solution to dry. Scrub with brush or scouring pad and rinse from top to bottom. Sanitize with appropriate sanitizer.

## Concentration Verification Procedure

# FCC-8

**Procedure No:** ChIAIk1

**Procedure Name:** Chlorinated Alkaline Titration

**Test Kit No:** MRTK5000-Z

**Factor:** 1 Drop = 0.222 oz per gallon

**Purpose:**

To measure concentration of diluted chlorinated-alkaline detergent

**Required Components:**

- 1) 10 mL Vial
- 2) Sodium Thiosulfate 0.0365N (MRST7705)
- 3) Phenolphthalein Indicator (MRPH1605)
- 4) Sulfuric Acid 1.0N (MRSA1625)

**Procedure**

- 1) Rinse vial 3 times with solution to be tested.
- 2) Fill vial to 10 mL mark with sample.
- 3) If chlorine level is greater than 600 ppm, add 5 drops of Sodium Thiosulfate 0.0365N (MRST7705) to react with the chlorine in the sample.
- 4) Add 3 drops of Phenolphthalein Indicator (MRPH1605) and swirl to mix. The sample should turn pink. If it does not, add more Sodium Thiosulfate (MRST7705), but no more than 5 drops. Add 2-3 drops of Phenolphthalein Indicator (MRPH1605). If sample still does not turn pink, chemical level is too low.
- 5) Add Sulfuric Acid 1.0N (MRSA1625) drop-wise while swirling until the sample color turns clear. Record the number of drops.
- 6) Multiply the number of drops by the conversion factor to obtain the amount of product.
