

QFT

Powdered Quaternary Floor Treatment

QFT is a dry blend of phosphates and Quaternary Ammonium Chlorides that is useful in all areas of food processing, especially RTE rooms and processing areas. QFT is unique in that it contains an actual dry quaternary component as its active ingredient. Many competing products coat a dry inert filler with liquid quat and do not provide the true time release action QFT provides.

QFT can be sprinkled on high-traffic areas to encourage spreading by foot and forklift traffic keeping floors clean and providing a long-lasting barrier of protection. QFT can also be used at the beginning of sanitation to clean floors and prevent processing equipment from becoming contaminated with soils from the floor and drains.

- **Cleans & Protects Floors in ALL Food Processing Establishments**
- **Perfect for Use in RTE Rooms**
- **Time Release Action**
- **Provides Protection Beyond the Foot Bath**
- **Odorless**
- **Rinses Easily**

Usage Directions: Sprinkle QFT evenly on the floor before the start of processing. Sprinkle in areas of high traffic and entrances to rooms. Use mechanical action from a brush, or even an employee's shoe to further spread QFT. Reapply QFT once it disperses or washes away.

Safety & Hazards

Wear Protective Eye Glasses and Chemical-Resistant Gloves While Using QFT

Consult SDS for Further Safety Precautions

DOT Shipping Name: Not Regulated

QFT Dilution Guidelines

Usage	Dilution
Normal Usage	2-5 Lb per 1000 Square Feet

Technical Information:

Appearance: Free-Flowing White Powder
Odor: None
pH: <11
Foam: Non-Foaming

Associated Products:

FCC-2, Heavy Duty Foaming Chlorinated Detergent With Caustic
103-F, Foaming Degreaser With Caustic
Special Acid Cleaner, Heavy-Duty Acid Detergent and Descaler
MG 4-Quat, 5th Generation Quaternary Sanitizer & Disinfectant
