

# Y-CO2 STR

Acid/Alkali Additive

Introducing Y-CO2 STR, an evolutionary Surface Tension Reducer, super water conditioner time saver additive. When used together with Acidic or Alkaline cleaner, Y-CO2 STR penetrates, suspends and removes even the toughest soils for fast and thorough cleaning. Its no foaming characteristic provides optimal cleaning.

Exclusively formulated to be used under CO2 pressure with K-Shine Special No. 4 in single phase cleaning of fermentation and aging tanks. No CO2 purge required. The acidic formula of K-Shine Special No. 4 combined with Y-CO2 STR as an additive, removes hop resin deposits and prevents beer stone formation eliminating the need of supplemental rinse additives. Since tanks are not opened during cleaning, spoilage organisms, wild yeast, beer stone formation and beer oxidation is reduced.

- **Low to No Foaming**
- **Formulated to be Used Under CO2 Pressure**
- **Provides Optimal Cleaning**
- **Removes Hops Resin Deposits**

**Usage Directions:** For every 100 gallons of circuit size, add 1.5 gallons of K-Shine Special No. 4 and then 20 ounces of Y-CO2 STR. DO NOT ADD Y-CO2 STR to K-Shine Special No. 4 directly.

Pre-rinse for 10 minutes. Make required acid cleaning solution following above dilution guide. Recommended cleaning time is 30 minutes. Rinse for 10 minutes. Sanitize with MG Peracid 6 for 5 minutes. Final rinse with water for 10 minutes.

## Safety & Hazards

Wear Protective Eye Glasses and Chemical-Resistant Gloves While Using Y-CO2 STR

**Consult SDS for Further Safety Precautions**

**DOT Shipping Name:** Not Regulated

## Y-CO2 STR

### Dilution Guidelines

Usage	Dilution
Every 100 gallons of circuit size	Add 1.5 gallons of K-Shine Special No.4
	And then 20 Ounces of Y-CO2 STR

## Technical Information:

Appearance: Clear  
Odor: Detergent/Mild  
pH: 3.50 - 4.50  
Foam: Low Foam

## Associated Products:

K-Shine Special No. 4, Heavy-Duty Acid Detergent and Descaler  
MG Peracid 6, 5.6% Peroxyacetic Acid Sanitizer
